As Senior Staff Frontend @ Blackhawk Network (BHN), Oct2022 – present

I am building multi-tenant and multi-language sites on Adobe Experience Manager (AEM) as backbone and frontend stack react and vanilla JavaScript, this project transforms legacy webapp into more controllable and better UI/UX. The legacy site is on WordPress and has scalability/multi tenancy concerns. AEM gives OOTB capability to connect to Adobe Commerce for Cart and Catalog management and customer flavors of react frontend components gives modern capabilities to write better UI. This project is hosted as mono-repo, multi-tiered architecture. We host multiple widgets from core services team to deal with ecommerce lifecycles for order management, cart management, payments, card holder services, payment tokenization and customer services tasks. We have implemented best observability also using kibana, splunk, new-relic and teams webhook.
